

The Center for Watershed Protection (CWP) is a non-profit corporation that provides local governments, activists, and watershed organizations around the country with the technical tools for protecting some of the nation's most precious natural resources: our streams, lakes and rivers. At their web site you will find links to storm water manuals, technical assistance and many other resources. They also have a listserv available to keep you updates on watershed protection information. Check out <http://www.cwp.org/index.html>

Their latest publication information:

New Research from the CWP: Impacts of Impervious Cover on Aquatic Systems

Available electronically from <http://www.cwp.org>

Price: \$25

The Center's newest report is a comprehensive examination of more than 225 multi-disciplinary research studies documenting the impact of urbanization and the associated impervious cover on aquatic systems. Written in a clear, accessible style, Impacts is the Center's most extensive exploration of imperviousness to date, and reviews the available scientific data on the myriad ways urbanization influences hydrologic, physical, water quality, and biological indicators of aquatic health.

The research distilled in this report was conducted in many different eco-regions, climatic zones and stream types. Weighing in at approximately 150 pages, Impacts includes more than 100 graphics and tables and is a must-read for watershed leaders, policy-makers and agency staff in watersheds across the country. Watch for hard copy version in April.
